

2011 federal tax credits

Signed into law in December 2010, the federal tax credit rewards homeowners who make high-efficiency improvements to their home, including replacement heating and cooling systems. The program allows homeowners to take up to a \$500 total credit on their taxes during 2011. The credit is limited by 10 percent of installed costs.

HERE ARE THE DETAILS:

- Qualifying product must be placed in service between January 1, 2011, and December 31, 2011.
- Qualifying product must be for taxpayer's principal residence.
- \$500 is the maximum total amount that can be claimed for all products placed in service in 2011.
- Qualifying product must have a Manufacturer Certification Statement, a signed statement from the manufacturer certifying that the product or component qualifies for the tax credit. Broan provides these Certifications on www.broanhvac.net. Taxpayers must keep a copy of the certification statement for their records, but do not have to submit a copy with their tax return.
- Homeowners should save their receipts.
